BASMA MOHAMED

Mobile Developer | AI-Assisted Development

Menofia, Egypt | +20 106 410 3157 | basmamohamedabdelalim@gmail.com | LinkedIn | Portfolio | GitHub

PROFESSIONAL SUMMARY

Flutter Developer with 3 years of experience building and shipping production cross-platform mobile and web apps for clients in healthcare, e-learning, ERP, media streaming and finance. Strong in Clean Architecture, state management (GetX, Bloc/Cubit, Provider), REST API integration, real-time features and payments (Paymob). Publishes apps to Google Play. Uses AI tools such as Claude Code to speed up development and debugging.

TECHNICAL SKILLS

- **Mobile & Web:** Flutter, Dart (Mobile & Web); Swift / SwiftUI (learning-level, one personal project)
- **State Management:** GetX, Bloc / Cubit, Provider
- **Architecture:** Clean Architecture, MVVM, MVC, Repository Pattern, SOLID, OOP
- **Backend & Data:** RESTful APIs (Dio), Firebase (Auth, Firestore), Hive, Ably (real-time), Paymob, AdMob / AdSense, SQL
- **Release & Publishing:** Google Play Console (app publishing, store listing, release management)
- **Tools:** Git, GitHub, GitLab, Postman, Android Studio, Xcode, VS Code
- **AI-Assisted Development:** Claude Code, prompt engineering, AI-assisted coding and code review

PROFESSIONAL EXPERIENCE

Mobile Application Developer | Hash Studio — Sep 2023 – Present

- Design and deliver client apps with Flutter for mobile and web, from requirements to release, across multiple client apps in healthcare, education, ERP, media and finance.
- Publish and release apps on Google Play, including store listing, screenshots and release management.
- Structure code with Clean Architecture, a repository layer and reusable UI components, so features can be added without rewriting existing screens.
- Integrate REST APIs, Firebase, Hive local storage, Ably real-time messaging and Paymob payments; optimize app performance and user experience.
- Work with backend developers and designers in a team workflow using Git.

Key Projects at Hash Studio

Gdawel – Multi-Tenant ERP (Mobile & POS) **Google Play**

- Updates released on Google Play.
- Built a multi-tenant architecture where each client has isolated data, serving multiple businesses from one codebase.
- Created dynamic, reusable UI components to fit different business needs across the mobile app and the POS; integrated APIs for users, roles and business operations; added real-time updates with Ably.

  Tech: *Flutter, GetX, REST APIs, Ably, Multi-Tenancy*

Dollar Bkam – Currency & Gold Rates App **Google Play**

- Built and published the app on Google Play: live currency and gold prices across Egyptian banks, a currency converter, bank comparison and price-history charts, from the official REST API.
- Integrated ads (AdMob) for monetization and push notifications to keep users updated.

  Tech: *Flutter, GetX, Dio, REST APIs, fl_chart, AdMob, Push Notifications, Google Play*

Wolf Drama – Video Streaming App (Mobile & Web)

- Built the app on a modular Clean Architecture with a dedicated Repository layer and reusable UI components.
- Implemented “Continue Watching” with Hive local storage; unified AdMob (mobile) and AdSense (web) monetization under a single GetX ad controller.

  Tech: *Flutter, GetX, Dio, Hive, AdMob, AdSense*

Wesal Alquran – Quran Learning Platform (Student–Instructor Sessions)

- Implemented the full booking flow: session scheduling, real-time meeting integration and secure online payments with Paymob.
  Tech: *Flutter, Provider, REST APIs, Paymob*

Eye Tracker – Eye-Care Patient & Surgery App

- Built an app for managing eye-care patients: records of the affected eye and diagnosis, surgeries tracked by category and procedure with filters, and events and visits for each patient.
  Tech: *Flutter*

Freelance Flutter Developer 2025 – Present

Doark – Clinic Booking & Queue Management App

- Built the app for three user roles (patient, doctor, receptionist): appointment booking and waiting-queue organization.
  Tech: *Flutter, REST APIs, Push Notifications*

PERSONAL & ACADEMIC PROJECTS

Sadaka Donation App + QR Scanner – Graduation Project

- Built a donation app: organizations and maps (Google Maps, geolocation), user profiles, Firebase / Google sign-in, a reward-coin system, and online payment with Paymob.
- Built a companion app that scans donation QR codes and exchanges reward coins through the backend API.
  Tech: *Flutter, Bloc / Cubit, Dio, Firebase Auth, Google Maps, Paymob, QR Scanning*

Social App – Social Networking App

- Built user profiles, posts and chat, with Firebase Authentication, Firestore and Firebase Storage for images; state managed with Cubit.
  Tech: *Flutter, Cubit, Firebase Auth, Firestore, Storage*

Meraki Store – iOS E-Commerce App (self-learning project)

- Built while learning iOS: SwiftUI with MVVM, product catalog and login through REST APIs, cart, favorites and checkout screens, with login token kept in Keychain.
  Tech: *Swift, SwiftUI, MVVM, URLSession, Keychain*

EDUCATION

Bachelor of Computer Science and Information | Menofia University 2020 – 2024
Grade: Very Good
